

-153-

vincristine, doxorubicin, cyclophosphamide, levamisole;
10) mastectomy, vincristine, doxorubicin,
cyclophosphamide; 11) mastectomy, cyclophosphamide,
doxorubicin, 5-fluorouracil, tamoxifen, halotestin,
5 radiation therapy; 12) mastectomy, cyclophosphamide,
doxorubicin, 5-fluorouracil, tamoxifen, halotestin.

In the treatment of locally advanced inflammatory
breast cancer, COX-2 inhibitors can be used to treat the
disease in combination with other antiangiogenic agents,
10 or in combination with surgery, radiation therapy or
with chemotherapeutic agents. Preferred combinations of
chemotherapeutic agents, radiation therapy and surgery
that can be used in combination with the present
invention include, but are not limited to the following
15 combinations: 1) cyclophosphamide, doxorubicin, 5-
fluorouracil, radiation therapy; 2) cyclophosphamide,
doxorubicin, 5-fluorouracil, mastectomy, radiation
therapy; 3) 5-fluorouracil, doxorubicin,
cyclophosphamide, vincristine, prednisone, mastectomy,
20 radiation therapy; 4) 5-fluorouracil, doxorubicin,
cyclophosphamide, vincristine, mastectomy, radiation
therapy; 5) cyclophosphamide, doxorubicin, 5-
fluorouracil, vincristine, radiation therapy; 6)
cyclophosphamide, doxorubicin, 5-fluorouracil,
25 vincristine, mastectomy, radiation therapy; 7)
doxorubicin, vincristine, methotrexate, radiation
therapy, followed by vincristine, cyclophosphamide, 5-
fluorouracil; 8) doxorubicin, vincristine,
cyclophosphamide, methotrexate, 5-fluorouracil, radiation
30 therapy, followed by vincristine, cyclophosphamide, 5-
fluorouracil; 9) surgery, followed by cyclophosphamide,

-154-

methotrexate, 5-fluorouracil, predinsone, tamoxifen,
followed by radiation therapy, followed by
cyclophosphamide, methotrexate, 5-fluorouracil,
predinsone, tamoxifen, doxorubicin, vincristine,
5 tamoxifen; 10) surgery, followed by cyclophosphamide,
methotrexate, 5-fluorouracil, followed by radiation
therapy, followed by cyclophosphamide, methotrexate, 5-
fluorouracil, predinsone, tamoxifen, doxorubicin,
vincristine, tamoxifen; 11) surgery, followed by
10 cyclophosphamide, methotrexate, 5-fluorouracil,
predinsone, tamoxifen, followed by radiation therapy,
followed by cyclophosphamide, methotrexate, 5-
fluorouracil, doxorubicin, vincristine, tamoxifen;; 12)
surgery, followed by cyclophosphamide, methotrexate, 5-
15 fluorouracil, followed by radiation therapy, followed by
cyclophosphamide, methotrexate, 5-fluorouracil,
predinsone, tamoxifen, doxorubicin, vincristine; 13)
surgery, followed by cyclophosphamide, methotrexate, 5-
fluorouracil, predinsone, tamoxifen, followed by
20 radiation therapy, followed by cyclophosphamide,
methotrexate, 5-fluorouracil, predinsone, tamoxifen,
doxorubicin, vincristine, tamoxifen; 14) surgery,
followed by cyclophosphamide, methotrexate, 5-
fluorouracil, followed by radiation therapy, followed by
25 cyclophosphamide, methotrexate, 5-fluorouracil,
predinsone, tamoxifen, doxorubicin, vincristine; 15)
surgery, followed by cyclophosphamide, methotrexate, 5-
fluorouracil, predinsone, tamoxifen, followed by
radiation therapy, followed by cyclophosphamide,
30 methotrexate, 5-fluorouracil, doxorubicin, vincristine;
16) 5-fluorouracil, doxorubicin, cyclophosphamide

-155-

followed by mastectomy, followed by 5-fluorouracil, doxorubicin, cyclophosphamide, followed by radiation therapy.

In the treatment of metastatic breast cancer, COX-2 inhibitors can be used to treat the disease in combination with other antiangiogenic agents, or in combination with surgery, radiation therapy or with chemotherapeutic agents. Preferred combinations of chemotherapeutic agents that can be used in combination with the angiogenesis inhibitors of the present invention include, but are not limited to the following combinations: 1) cyclophosphamide, methotrexate, 5-fluorouracil; 2) cyclophosphamide, adriamycin, 5-fluorouracil; 3) cyclophosphamide, methotrexate, 5-fluorouracil, vincristine, prednisone; 4) adriamycin, vincristine; 5) thiotepa, adriamycin, vinblastine; 6) mitomycin, vinblastine; 7) cisplatin, etoposide.

Prostate Cancer

Prostate cancer is now the leading form of cancer among men and the second most frequent cause of death from cancer in men. It is estimated that more than 165,000 new cases of prostate cancer were diagnosed in 1993, and more than 35,000 men died from prostate cancer in that year. Additionally, the incidence of prostate cancer has increased by 50% since 1981, and mortality from this disease has continued to increase. Previously, most men died of other illnesses or diseases before dying from their prostate cancer. We now face increasing
